

vector CAD/CAM

Review

H. Kittner GmbH

As a service provider in the machine - and fixture construction, and as a manufacturer of special driving elements we are using since more than 10 years vector CAD / CAM

After long searching and trying we finally decided to buy this CAD / CAM program. The decisive factor was first and foremost the ease of use. For us it is always , helping our customers to find quickly a solution. Another point was the optimal price - performance relation. This is still true when it comes to expansion of the CAD / CAM program, for example for the 3-D field.

Also the hotline from Centriforce we find optimal. It is fast, flexible and convenient, this especially we appreciate much in today's fast paced time. Absolutely Super!

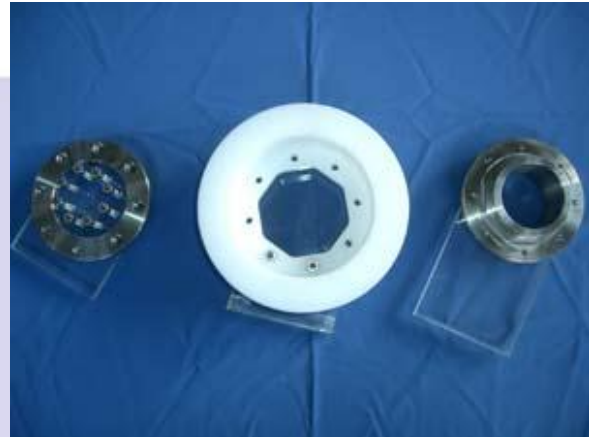

We produce among other things VA-VARIO sprockets and drive elements which are quickly interchangeable. Our VARIO-drive element is patent pending.

Everything was constructed with vector CAD / CAM and programmed for our CNC machines. Changes in the design have been easily and quickly implemented.

Also the programming and the connection to our CNC machines went smoothly.

Due to the production of special-VARIO drive elements and drive elements there always is

something to construct. But with vector CAD / CAM it is not a problem.

We never want to miss vector CAD / CAM any more and thank the team at this point for the optimal support in the past very much!

With best regards

Heinrich Kittner
